

S2 - 07. HUBBLE, A TELESCOPE IN SPACE

Director(s): Etienne DE CLERCK

Writer(s): Serge BRUNIER, Bruno BUCHER

In Washington D.C., Serge has an appointment with the most famous telescope of all time: the Hubble Space Telescope which is celebrating its silver anniversary of 25 years in space!.

Hubble is in orbit 600 km from Earth and has been sending us the most fabulous images of the universe for the last quarter of a century! These photographs are not only a true explosion of colours, but their unprecedented accuracy has revealed a cosmos that we had never imagined. Cosmologists use them trying to determine the age of the Universe.

But this scientific instrument is also something of a dream factory that makes us travel from the vicinity of the Earth to the remotest galaxies and nebulae.

AVAILABLE FOR VIEWING: original French version only.

Categorie(s): Science & Environment, Collections - Series

Tag(s): Technology, discovery, Space, Astronomy
